a Example fields and nuclear masks

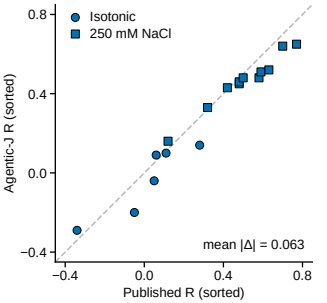

Su(Hw) **γH2Av** outline: DAPI mask (Agentic-J)

b Pearson's R above Costes threshold, per field

c Field values, rank-matched

Increase under NaCl (Δ mean R)

Published: +0.490 [+0.31, +0.68], $P = 1.6\times10^{-4}$

Agentic-J: +0.498 [+0.35, +0.65], $P = 8.1\times10^{-5}$

95% bootstrap CI; exact permutation test.
Published values are not linked to files,
so fields are matched by rank.
